

EPSC Process Safety Leadership Development

Signing a code of conduct does not create true leadership

Experiencing a critical situation involving safety, in a role play workshop, is used to challenge and discuss the behaviour of senior leaders, to support process safety.

Suitable prepared actual cases include:

Texas City Refinery incident
(Corporate vs Site / Cost vs Safety)

Challenger accident
(NASA vs Morton / Time vs Safety)

Air France Flight 447
(What went wrong vs Liability)

Work shop target group: Senior Leaders, that have an influence on hazardous operations

Partners that can provide this development: [New Behavior](#) & [Premier Safety](#)

Safety Leadership must be developed in companies that deal with hazardous chemical processes
