Process Safety Leadership it takes 2 to tango

To continue the efforts of the EPSC workgroup we organize this webinar as a sneak preview of the 2 days (in company) training. Process Safety is essential in a hazardous business. How do you provide leadership in this area?

The combination of deep technical expertise and advanced leadership skills are not common. How to overcome this Challenge? Start with a shared experience as leaders and reflect on your behavior: How do you act as a leader to prevent process safety events? What changes in a stressful situation like high severity safety events?

Aspects to be discussed in an interactive setting

- Simulation of a real life case (with videos)
- Reflection on your own role and the required cooperation
- Work with systems thinking
- Gain insights in leadership development
